

Cement & Concrete Composites

Editor

N. BANTHIA

University of British Columbia, Vancouver, BC, Canada

Associate Editors

D. P. BENTZ

National Institute of Standards and Technology, Gaithersburg, MD, USA

J. E. BOLANDER

Department of Civil and Environmental Engineering, University of California, Davis, CA, USA

O. KAYALI

University of New South Wales, Canberra, Australia

Honorary Editor

R. N. SWAMY

Editorial Board

M. Alexander

University of Cape Town, Rondebosch, Cape Town, South Africa

J. J. Beaudoin

National Research Council Canada, Ottawa, Canada

K. Ghavami

Pontificia Universidade Catolica/PUC-Rio, Rio de Janeiro, Brazil

H. Justnes

Sintef Civil & Environmental Engineering, Trondheim, Norway

K. Kovler

Israel Institute of Technology, Haifa, Israel

K. Kurtis

Georgia Institute of Technology, Atlanta, GA, USA

Y. M. Lim

Yonsei University, Seoul, South Korea

P. Lura

EMPA, Dübendorf, Switzerland
ETH Zürich, Switzerland

M. Maslehuddin

King Fahd University of Petroleum and Minerals, Dhahran, Saudi Arabia

M. F. Montemor

Universidade Técnica de Lisboa, São João De Deus, Lisboa, Portugal

A. E. Naaman

The University of Michigan, Ann Arbor, MI, USA

N. Neithalath

Arizona State University, Tempe, AZ, USA

M. Sahmaran

University of Gaziantep, Gaziantep, Turkey

C. Shi

Hunan University, Hunan, China

V. Slowik

Leipzig University of Applied Sciences, Leipzig, Germany

K. H. Tan

National University of Singapore, Singapore

This journal is designed to reflect current developments and advances being made in the general field of cement-concrete composites technology and in the production, use, and performance of cement-based construction materials. The word cement is interpreted in a wide sense, including not only Portland cement but also blended cements and other binding materials. In addition to novel aspects of conventional concrete materials, the journal covers a wide range of composite materials such as fiber-reinforced cement composites, polymer cement composites, polymer impregnated composites, ferrocement, and cement composites containing special aggregate inclusions or waste materials. Original papers dealing with microstructure (as it relates to engineering properties), material properties, testing and test methods, fracture mechanics, durability aspects, composite mechanics/technology, modelling, design, fabrication and practical applications of these materials form the major themes of the journal. Provided there is sufficient linkage to properties defined at the

material scale, papers concerning the behavior of structural components and systems, in situ performance, and field studies will also be accepted for review, as well as those concerning the repair and maintenance, serviceability behavior, and sustainability of structures made with these materials.

The journal has within the above context several specific objectives. It wants to foster a better understanding of construction materials, provide a forum for unusual and unconventional materials, encourage the development of low cost energy saving materials and bridge the gap between materials science, engineering performance, environmental effects, in situ behavior, design/service life and construction. It is the intention of the journal to also publish special issues devoted to topics of current or emerging interest. The journal aims to provide a unifying basis for collaboration between materials scientists, engineers, designers and fabricators.
