EDITORIAL

CCR's New Look Planned in 1996

1994 and 1995 have been important transition years for CCR, initiating a number of changes in the style of the journal, its size, and increasing the frequency of publication. Most importantly, several new Editorial Board members have joined us to help in this venture.

In my last editorial I had promised that there would be further changes beginning with CCR's 26th year which is now almost upon us. First, watch for the new cover which will mark the beginning of a monthly publication frequency. This will bring new research results to your attention on a more timely basis.

Now, more importantly, what else can you anticipate inside? First, we expect to continue to include high quality papers from authors across the broad field of cement and concrete research, as defined in the Aims and Scope. The method of manuscript preparation and publication, however, will undergo additional modification to facilitate a transition to electronic publishing. Authors are now encouraged to submit their final manuscripts on disk as well as the usual hard copy version which must, of course, be identical. Please refer to the more detailed instructions in the back of the journal. This new procedure should be relatively routine for most authors who now use good quality word processors/desk-top publishing in preparation of their manuscripts. Both Macintosh and PC versions will be acceptable to assure maximum flexibility.

We look forward to interacting with authors and readers during this coming year, and hope you will all be pleased with the "new look" and increased frequency of the journal.

Della M. Roy
Editor-in-Chief
