

Erratum[☆]

“Properties of BRECEM: 10-year results,” by B. Singh, A.J. Majumdar and K. Quillin [Cem Conc Res 29(3) (1999) 429–433] contained typographical errors in Table 3 on page 431. The symbols used to identify the phases that were detected by XRD have been reversed. In the original manuscript the symbol, a tick (✓), was used to indicate where a phase was detected and a cross (x) to indicate where it was not detected. In the published version the tick was replaced by a minus sign (–) and taken to indicate that the phase is absent. Similarly the cross was replaced by a plus sign (+) and taken to indicate that the phase is present. The description of the results given in the text is correct. The corrected Table 3 appears below.

Table 3

Phases detected by XRD in 10-year-old concrete samples

Material	T/°C	CAH ₁₀	C ₃ AH ₆	AH ₃	C ₂ ASH ₈	Hydrotalcite
CAC	20	–	+	+	–	–
	38	–	+	+	–	–
50:50 CAC + ggbs	20	–	–	–	+	+
	38	–	–	–	+	+

+, detected by XRD; –, not detected by XRD. Calcite and quartz (from the aggregate) were detected in all samples.
