Call for Papers

Preliminary Conference Announcement for **Cement & Concrete: Building the Needs for the 21st Century**, Lake Tahoe in September 2001. The conference will be specifically directed towards discussing the impact of the research carried out over the last 30 years. The objectives of the conference include:

- Summarizing the state-of-the-art in cement and concrete science;
- Defining the critical research needs in cement and concrete;
- Exploring the nature of the interaction between academic research, industrial opportunities and problems for cement-based systems; and
- Reviewing the funding from federal and state agencies that has been directed towards acquiring both fundamental knowledge, addressing practical problems in construction, service life considerations and also toward problems and opportunities in non-traditional uses.

Invited and submitted presentations will explore the following:

- Can we quantify the intersection between fundamental studies and industrial opportunities and problems?
- How does implementation work or not work: How has concrete improved?
- What are the mechanisms by which research has influenced industrial practices? What has been useful? What has failed? How can we improve the transfer of technologies?
- Are technology transfer issues unique to cement and concrete or are they generic to other basic industries such as ferrous metals, glass, etc? What can we learn by assessing these industries?

The core of this conference will be a series of invited lectures by leading experts from industry, academia and government. Conference organizers are Paul W. Brown and Michael Silsbee of the Materials Research Laboratory at The Pennsylvania State University, University Park, PA 16802 USA. If you are interested, please e-mail with your contact information (name, affiliation, address, phone, fax and e-mail) to Kathy Moir, Conference Secretariat, 103 Materials Research Laboratory, University Park, PA 16802 USA. Tel: (814) 863-9983; Fax: (814) 863-7040; E-mail: kathymoir@psu.edu
